
Table of Contents

Preface	ix
1.1 Foreword by Ulli Hankeln	x
1.2 Foreword by Peter Rudolf	xi
1.3 Audience	xiii
1.4 The Structure of this Book	xiii
1.5 Further Support	xvi
1.6 Acknowledgements	xvii
1.7 About the Author	xvii
1.8 About the Publisher	xviii
First Contact	xix
1 Virtualization – An Introduction	1
1.1 Technology	2
1.1.1 Hardware Independence	4
1.1.2 Partitioning	5
1.1.3 Isolation	5
1.1.4 Consolidation	6
1.1.5 Portability	6
1.1.6 Other features	7
1.2 Reasons for Virtualization	8
2 VMware Player compared with VMware Workstation	9
2.1 Architecture	10
2.2 Range of Functions	12
2.3 Comparison with VMware Workstation 5.5	12

2.4	Vendor Support	14
2.4.1	Host Operating Systems	14
2.4.2	Guest Operating Systems	16
2.5	Possible Uses	18
3	Installation and Update of VMware Player	21
3.1	Preparation	21
3.2	Installation on Microsoft Windows	22
3.3	Update on Microsoft Windows	26
3.4	Removing VMware Player on Microsoft Windows	26
3.5	Installation Problems	27
3.6	Installation on Linux	27
3.7	Update on Linux	32
3.8	Removing VMware Player on Linux	33
3.9	Tuning VMware Player	33
4	Getting to know VMware Player	37
4.1	The Configuration File	37
4.2	Configuring the Startup of the Virtual Machine	40
4.3	The Configuration Menu	41
5	A comparison of VMware Server, GSX and ESX	45
5.1	Introduction	45
5.2	Architecture	46
5.3	Functionality	47
5.3.1	VMware Server	47
5.3.2	Virtual Machine	47
5.3.3	Host Operating Systems	49
5.3.4	Guest Operating Systems	50
5.4	Comparison with VMware GSX	53
5.5	Comparison with VMware ESX	54
5.6	Possible Uses	57
5.7	Licensing and Support	58
6	Installation and Update of VMware Server	59
6.1	Preparation	59
6.2	Windows or Linux?	61
6.3	Installation on Microsoft Windows	61
6.4	Update on Microsoft Windows	67
6.5	Deinstallation with Microsoft Windows	68

6.6	Installation on Linux	68
6.7	Update on Linux	77
6.8	Deinstallation on Linux	77
7	Virtual Hard Disks	79
7.1	Virtual Disk Types	80
7.2	Hard Disk Capacity	81
7.3	Physical Hard Disk Drives	83
7.4	Independent Mode	84
	7.4.1 Persistent Mode	85
	7.4.2 Non-persistent Mode	85
7.5	Snapshots	86
7.6	The Command Line	89
7.7	Performance Tuning	90
8	Virtual Networks	93
8.1	VMware Server and VMware Player	93
	8.1.1 How are the VMnets used?	95
	8.1.2 Changing the Network Adapter in the Configuration File	98
	8.1.3 Internal DHCP Server	99
	8.1.4 Guest-only	101
	8.1.5 Host-only	101
	8.1.6 Bridged Networks	104
	8.1.7 NAT Networks	107
8.2	General Networking Technology	115
	8.2.1 Adapter Teaming, Fault Tolerance, Load Balancing	115
	8.2.2 Switched Network	116
	8.2.3 Dedicated LAN Connection	116
	8.2.4 VLAN (Virtual Local Area Network)	117
9	Managing VMware Server	119
9.1	Web Administration Interface	120
9.2	VMware Server Console	127
9.3	Command Line	132
9.4	Programming Interface	132
9.5	Logging	133
10	Creating a Virtual Machine	135
10.1	The Virtual Machine on the Host System	135
10.2	VMware Server Console (VSC)	137
	10.2.1 Creation of the Virtual Machine	137

10.2.2	Modifying the Virtual Hardware	150
10.3	Access Restrictions	152
11	Operating System Installation on the Virtual Machine	155
11.1	General Considerations	155
11.2	Installation from CD/DVD	160
11.3	Floppy Disk Drives	163
11.4	Images	164
11.4.1	ISO Images	165
11.4.2	Floppy Image	166
11.5	Installation over the Network	169
11.6	Hard Disk Controller	170
11.7	Specials	171
12	VMware Tools	173
12.1	Microsoft Windows	174
12.1.1	Installation	174
12.1.2	Upgrade	181
12.1.3	Unattended Installation	181
12.1.4	Deinstallation	184
12.2	Linux	185
12.2.1	Installation	185
12.2.2	Upgrade	187
12.2.3	Deinstallation	187
12.3	Functions	188
13	Preconfigured Virtual Machines	193
13.1	VMware Technology Network (VMTN)	194
13.2	Using Preconfigured Virtual Machines	195
13.3	Creating a Virtual Machine yourself	195
13.3.1	Creation of the Virtual Machine	196
13.3.2	Configuration of the Virtual Hardware	201
13.3.3	Installing the CentOS Operating System	202
13.3.4	Removal of Redundant Hardware	206
13.3.5	Compressing all Essential Files	207
13.3.6	The Final Touches	207
13.3.7	Licenses	208
13.4	Commercial Use	208
13.5	Trendsetting	209
13.6	An Important Warning	209

14	VMware Player for Advanced Users	211
14.1	Creation of Virtual Machines	211
14.2	Configuration Changes	213
14.2.1	Changing the Floppy Disk Drive (Floppy Image)	213
14.2.2	Changing the CD/DVD Drive (ISO-Image)	214
14.2.3	Changing the Hard Disk File (SCSI)	215
14.2.4	Changing the Hard Disk Controller	215
14.2.5	Changing the Network Card Type	215
14.2.6	Changing the Network Association	216
14.2.7	Changing the Fixed MAC Address	217
14.2.8	Changing the Guest Operating System	217
14.3	Installation within the Virtual Machine	218
14.3.1	Operating System	218
14.3.2	VMware Tools	219
15	VMware Server for Advanced Users	221
15.1	Programming Interfaces	221
15.2	Command Line	224
15.2.1	vmware-cmd	225
15.2.2	vmware-vdiskmanager	228
15.2.3	vmware-mount	231
15.2.4	vmware-support.vbs	233
15.2.5	vnetstniffer	234
15.2.6	vnetstats	236
15.2.7	vnetlib	236
15.3	System Monitoring (Perfmon VMware)	238
15.4	Cloning and Migration (P2V)	239
15.4.1	Cloning within a Version	240
15.4.2	VMware Internal Migration	243
15.4.3	Migration from a Physical Machine to a VM (P2V)	244
15.5	Microsoft Cluster Service	247
15.5.1	Cluster between Virtual Machines	247
15.6	Backup and Disaster Recovery	251
15.6.1	Backup within the Guest Operating System	252
15.6.2	Backup via the Host System (Image Backup)	252
15.6.3	Disaster Recovery for a Virtual Machine	253
15.6.4	Disaster Recovery on the Host System	253
15.7	Further Settings	253
15.7.1	Fixed MAC Address of the Virtual Machine	254
15.7.2	VMs do not switch off completely after Shutdown	254
15.7.3	Disabling Logging	255
15.7.4	Disabling Logging for individual Virtual Machines	255

15.7.5	Restricting a VM to a certain Processor	255
15.7.6	Local mounting of a CD-ROM Image (ISO) on Linux	256
15.7.7	Use of a Windows Share on VMware Server (Linux-based)	256
15.7.8	Changing Ports	258
15.7.9	VMware Server access to VMware Server where the Authorization Process does not run on the Default Port 902	259
15.7.10	Configuration Problems with newer Linux Distributions	260
16	Licenses	261
16.1	Host System	262
16.2	Guest System	262
16.2.1	Operating System	262
16.2.2	Applications	263
17	Add-On Tools	265
17.1	Migration – P2V and V2V	265
17.1.1	VMware P2V Assistant	266
17.1.2	VMware Virtual Machine Importer	276
17.1.3	Platespin PowerConvert	279
17.1.4	Leostream P>V Direct	290
17.1.5	Helperapps DDChanger	294
17.1.6	Ultimate P2V Tool	299
17.1.7	Physical 2 Partimage 2 Virtual (p2pi2v)	300
17.2	Management Tools	300
17.2.1	Akimbi Slingshot	300
17.2.2	Dunes VS-0	304
17.2.3	Invirtus VM Optimizer	311
17.2.4	Platespin PowerRecon	313
17.2.5	VMware VirtualCenter	314
18	Choice of the Right Hardware	321
18.1	Hardware	321
18.1.1	The Importance of the Decision	321
18.1.2	Supported Hardware	322
18.1.3	Two-, Four- or Multi-Way Systems?	322
18.1.4	Vendors	329
18.1.5	Hardware Test	329
18.2	Determining the Size of the Host System	330
18.2.1	Performance Data and Availability	330
18.2.2	Processor	333
18.2.3	RAM	334
18.2.4	Disk Storage	335

18.2.5 Network Connection	340
18.3 Infrastructure	340
18.3.1 Disk Storage	341
18.3.2 Networks	342
19 Ideal Guest Systems	347
19.1 What Systems exist in your Company?	348
19.2 Performance Measurement	351
19.2.1 Tools for Measurement	352
19.2.2 Evaluation of the Virtual Machine	353
19.3 Which Systems are suitable for Virtualization?	353
19.3.1 Ideal Candidates	354
19.3.2 Problematic Server Systems	355
19.3.3 Availability and Security	355
19.4 Overall Concept	356
19.4.1 Virtualization of the Test or Lab environment	357
19.4.2 Virtualization of lightly-loaded Systems in the Production Environment ..	358
19.4.3 Total Virtualization	360
Glossary	365
Weblinks	369
Index	373
